Abdelrahman Abozena

SWE Intern at Microsoft | AI & Data Science | LLM Agents & Backend Systems

Giza, Egypt | boodyabozena@gmail.com
linkedin.com/in/abdelrahman-abozena | github.com/abdoabozena7 | Portfolio

PROFILE

Computer Science undergraduate and Software Engineering Intern at Microsoft, with experience in AI engineering and backend development. Builds LLM agents, RAG workflows, multi-agent systems, machine learning pipelines, and Python/FastAPI applications. Portfolio includes local-model coding tools, verification workflows, simulations, and real-time data systems.

PROFESSIONAL EXPERIENCE

Microsoft | SWE Intern

Oct 2026 - Present | Cairo, Egypt

Software engineering internship at Microsoft.

Instant Software Solutions | AI & Data Science Engineer

Jan 2026 - Present | Giza, Egypt

Foursw | Artificial Intelligence Engineer

Jun 2026 - Oct 2026 | Giza, Egypt

Designed and implemented AI solutions, integrating LLMs, AI agents, and intelligent workflows into software systems to address business requirements.

EgenSolve | Back End Developer

Mar 2025 - Apr 2025 | Giza, Egypt

Developed an employee-account and system-issue management backend, connecting users with developers for faster problem resolution.

Crossover | React Developer

Oct 2022 - Dec 2023 | Part-time freelance

Contributed React development and reusable frontend components through Crossover on a part-time freelance basis.

INTERNSHIPS & APPLIED TRAINING

FlyRank AI | Backend AI Engineering Internship

May 2026 - Aug 2026 | Giza, Egypt

Orange | Intern

Jul 2026 | Qesm El Doki, Egypt

Built AI agent workflows using Flowise and n8n, integrating RAG, vector databases, memory, and external tools and data sources.

Digital Egypt Pioneers Initiative (DEPI) | Machine Learning Engineer

Nov 2025 - Jul 2026 | Egypt | Completed Microsoft Machine Learning Engineer track

EDUCATION

Egyptian Chinese University | Computer Science

Undergraduate program

Harbin Institute of Technology | International AI Summer School

Jul 7-18, 2025 | Completed

Artificial Intelligence, Leading the Frontier.

HONORS & CERTIFICATIONS

IMPACT Hackathon - 1st Place - GDG on Campus, Egyptian Chinese University | Hivo Studio | 2026

AI Agents Intensive - Google x Kaggle | Certification

GCI World April 2026 - Data Science - Matsuo-Iwasawa Laboratory, The University of Tokyo | Final assessment passed; certificate issued Aug 31, 2026

Learning C# - LinkedIn Learning | Oct 29, 2026 | 2h 54m

Artificial Intelligence Level 1 - Orange Digital Center | Sep 14-23, 2024 | 24 hours | Grade 99%

TECHNICAL SKILLS

AI / ML - LLM Agents, RAG, LangGraph, Generative AI, multi-agent systems, deterministic LLM programming, prompt engineering, Ollama, Transformers, NLP, machine learning, deep learning

Data Science - EDA, preprocessing, feature engineering, model evaluation, CTR prediction, sentiment analysis, computer vision/YOLO, data fusion

Backend / Tools - Python, FastAPI, Node.js, Express, REST APIs, WebSockets, Kafka, Streamlit, MLOps, Flowise, n8n, MySQL, MongoDB, SQLite, Git, Docker basics

Frontend / Languages - React, Vite, Tailwind CSS, JavaScript, TypeScript, C#

PORTFOLIO PROJECTS

Hivo Studio - Multi-Agent Coding System | In progress [Repository]

TypeScript, Rust, LLM Agents, Ollama

Built a local-first coding workspace with coordinated agents for task planning, coding, validation, and context management, supporting local-model development workflows.

HarrTest | In progress [Repository]

Agent skill, verification, open source

Developed an agent skill for planning, implementation, execution, observation, and verification, requiring runtime evidence before reporting a task complete.

YA RAB OSTORHA | In progress [Repository]

Python, CARLA, simulation

Developing a collision-avoidance prototype to explore decisions before a crash in a CARLA driving simulation.

Wazzefni [Repository]

LangGraph, FastAPI, React

Contributed to an AI-guided career workflow combining job exploration, qualification planning, skill evidence, and CV development.

AgenticAI Community Simulator [Repository]

Python, FastAPI, React, WebSockets, MySQL

Built a multi-agent platform where AI personas discuss user-defined ideas and influence opinion evolution, with live simulation events, reasoning, and dashboards.

Prompt Optimizer for Coding Agents [Repository]

Python, FastAPI, React

Built a tool that combines user intent and code evidence, identifies blind spots, asks clarifying questions, and generates structured prompts for coding agents.

Tayara Three.js [Repository]

Three.js, JavaScript, 3D

Built a low-poly flight game with islands, coins, and ring objectives.

ADDITIONAL AI & DATA SCIENCE PROJECTS

AdClick Prediction System / Project Fusion ECU - Python, scikit-learn, XGBoost, Streamlit. Built a leakage-safe, time-aware CTR pipeline with fused user/ad data, feature engineering, evaluation, and a prediction console.

Real-Time Comment Analysis & Fake Comment Detection - FastAPI, Kafka, Python, Ollama, SQLite, React. Built a sentiment and suspicious-behavior analytics pipeline with alerts and live monitoring.

Ask Your PDF with Transformers - FastAPI, Transformers, PyTorch. Built PDF/TXT question answering with extraction, section selection, and supporting context.

Robot Vision / Real-Time Object Detection - Python, computer vision. Built detection and tracking workflows for robot point-of-view videos.

Agentic Router Attack Simulation - Agentic AI safety. Simulated router manipulation and task tampering to examine data leakage in agent workflows.
